

What did we learn? Closing ideas from conference attendees

- **Military Pipelines** – need greater understanding – continue to investigate if this is a problem at multiple military bases
- **PIPA** – Keep it going! **IMPLEMENTATION!**
- **Damage Prevention** – state by state – the Trust and Operators should push – One Call exemptions need to be examined as well
- **PHMSA** has good outreach – needs better understanding of the reality on the ground regarding how some operators operate.
- **Public Outreach & Schools** – School programs are a great way to educate the future and to get a message to trickle up to parents
- **Better clarity and fairness with pipeline easements** – Follow up by INGAA on landowner communication when problems with companies are identified. Liquid side of industry needs a similar commitment.
- **New pipeline construction** – better outreach & understanding of “the need”, how siting works, and actual construction - Where the line is between FERC & PHMSA, and how do they interface? Clarity on what government entities (if any) site liquid lines, and discussion of how it could be improved.
- **Best practices when new pipelines are coming to a community** – what should a community know early on?
- **Get FERC / NEB attendance at next year’s conference**
- **Ideas for the new president and congress** – How do we get them to pay attention to these issues?
